1 · DOMAIN KNOWLEDGE
Situated expertise
Compiler and ISA constraints
Physical implementation limits
Workload and product obligations
2 · ELICIT AND ORGANIZE
AI-assisted elicitation
Interview and document synthesis
Candidate assumptions and constraints
Contradictions and missing cases
Proposes entries without authority
3 · DOMAIN VALIDATION
Domain specialist
Checks with tools and records
Qualifies meaning, scope, and conflicts
4 · STATE-ENTRY DECISION
Project-state owner
Accepts or rejects entry
Records scope, expiry, and reopening
no direct authority path
5 · REPRESENT IN THE STUDY
Represented study state
machine-readable, scoped, attributable, and open to challenge
Constraints
legal moves
Assumptions
scope and basis
Rejection checks
early failures
Validity conditions
scope and expiry
Authority boundary
Elicitation can surface and organize knowledge. It cannot write authoritative study state without domain validation and a separate state-entry decision.
conflict, expiry, or new evidence triggers revalidation
