

## MATCHED STUDY DEFINITION

### Same architecture question and evaluator-owned evidence standard

declared starting artifacts and source access · shared evaluation tools · evaluator-owned acceptance checks  
conditions · common cost-accounting window · budgets · stopping rules · reporting  
Qualified expertise and all interventions are recorded; expertise is not assumed equal

#### AI-assisted complete system

##### COMPONENTS AND METHODS

model and version · retrieval · generation · prediction · optimization

##### STATE AND EXECUTION

design state · workflow tools and checks · human expertise and work

##### IDENTITY AND LIMITS

versions · permissions · expertise · material settings · interventions

#### Strongest practical complete system

##### PRACTICAL METHOD

human-directed study · established flow · heuristic or tuned optimizer

##### STATE AND EXECUTION

design state · workflow tools and checks · human expertise and work

##### IDENTITY AND LIMITS

versions · permissions · expertise · automation · interventions

#### Result record

- supported architecture outcome or bounded failure
- stated limits, failed runs, repeats, and varied conditions
- setup, operation, review, repair, and recovery work
- model, tool, data, and elapsed resources

#### Result record

- supported architecture outcome or bounded failure
- stated limits, failed runs, repeats, and varied conditions
- setup, operation, review, repair, and recovery work
- model, tool, data, and elapsed resources

## PAIRED COMPLETE-SYSTEM DIFFERENCES

### Task-paired architecture outcome and total resource differences

matching assumptions · uncertainty · tested tasks, runs, workloads, and implementation conditions

## BOUNDED PROGRAM STATUS

supported · unsupported · unresolved

**The assessment does not authorize architecture commitment.**
