

SCOPED STUDY DEPENDENCIES

Scoped study

question, baseline, design space, constraints, and intended decision

Architectural claim under review

mechanism, expected effect, scope, and what would rule it out

Represented state + tools

encoded state, valid actions, observations, and tool path

Linked actions + tool returns

method roles compose as needed; iteration may revisit dependencies

Results + review

results, provenance, uncertainty, rejection checks, and decision authority

revise claim
or study

finding or architectural decision
