**Workload and contract**
Kimi-derived computation
Objectives · constraints · Lab 1

## Learn the models

**Data and representations**
Coverage · splits · encodings
Labs 1–2

**Train and adapt**
Small language model
Labs 4–5

**Versioned checkpoint**
Tokenizer · weights · record
Loaded by the proposer

## Operate the design harness

**Choose the next action**
Predict · generate · optimize
Models and conventional methods · Labs 5–6

**Materialize the candidate**
Software · numerics · RTL
One identified design · Labs 3, 7

**Run checks and simulation**
Correctness · traffic · cycles
Tool adapters and failure handling · Labs 2–3

**Interpret and record evidence**
Artifacts · measurements · failures
Feedback guides the next action

## Implement physically

**Synthesize**
Logic and realized memories
Selected checked candidates · Lab 8

**Place and route**
Floorplan · clock · wiring
Complete teaching accelerator

**GDSII and physical checks**
Geometry · timing · connectivity
Named platform and check coverage

Curate development trajectories for later adaptation

Independent evaluation
Untouched cases · matched baselines

**Architect evaluates and decides**
Accept · revise · reject
Architecture result and total process cost · Lab 9
