
Curated development records update the model
Data and workload · Lab 1
Sources, distributions, splits
Numerics, objectives, budgets
Train and adapt · Lab 4
Small design language model
Parameter updates and lineage
Checkpoint · Lab 5
Weights and input contract
Reloadable inference
task and data
checkpoint inference
Experiment harness · Lab 3
Candidate identity, execution limits, raw results
Represent · Labs 2, 5
Packed values and observations
Bounded, attributed retrieval
Choose · Labs 5, 6
Propose, predict, and search
Learned or conventional methods
Materialize · Lab 7
Workload program and RTL
Exact candidate artifacts
functional receipts
tool observations
execute
Tool records
Checks, measurements, costs
Candidate and split identities
Physical tools · Lab 8
Layout, timing, DRC, and LVS
GDSII and correspondence
Functional tools
Workload and memory protocol
Cycles, traffic, numerical checks
selected
held-out receipts
Evaluate · Lab 9
Held-out results, baselines, and total cost
Frozen checkpoints and matched budgets
review
Architect decision
Evidence, tradeoffs, and limits
Accept, revise, reject, or defer
