(a) Layer 1: Point assistance
Inputs
Task within an established design
Permitted work
Draft or analyze one local artifact
Feedback and result
Engineer checks result and selects next action
(b) Layer 2: Container-bound optimization
Inputs
Workload, constraints, and prescribed template
Permitted work
Search choices encoded in the fixed template
Feedback and result
Tool results guide parameter selection
(c) Layer 3: AI-native design system
Inputs
Requirements, limits, and correctness contract
Permitted work
Revise hardware and software beyond the template
Feedback and result
Physical feedback guides joint revision
Each layer needs checks appropriate to its claims.
A study may return candidates, limits, or an unresolved result.
Moonshot target: a complete implementation that passes signoff.
