
Design system
Learned model (optional)
Knowledge from prior designs
Proposals, estimates, or analysis
Experiment software
Conventional search and scripts
Select and prepare candidates
Engineering tools
Compile, simulate, implement,
and check each candidate
Current experiment inputs
Requirements and workload
Matching hardware and software versions
Tool settings and process information
Saved evaluations
Measurements, reports, and failed runs
Associated with the candidate and settings
Available for comparison and the next step
The model’s learned parameters do not replace the current inputs and results.
