Representation record
state a method can inspect
current design + workload
constraints + context
observations + decisions
Proposed action
property + proposed value
anticipated effect
Scoped consequence model
predicts within stated limits
supported state + actions
model prediction
uncertainty + scope limits
Environment + tool path
applies checks; invokes tool
using represented state + action
Tool observation
returned value + status
cost, fidelity, provenance
Study record
state + action + anticipated effect + prediction
observation + provenance + coverage + failures + decision
