
A rollback restores the earlier candidate
Candidate S_t
Signature $H(S_t)$
Before repair
Physical repair
Candidate S_{t+1}
$H(S_{t+1}) \neq H(S_t)$
Physical artifacts changed
Rollback
Candidate S_{t+2}
$H(S_{t+2}) = H(S_t)$
Earlier artifacts restored
Matching candidate signatures
Signature inputs: canonical netlist, placement/routing database, and effective loaded constraints.
Before retrying: check tool configuration, random state, policy state, and action history. A candidate match alone does not establish a workflow cycle.
