
Candidate minus baseline
Same workload and system boundary
Compute
$\Delta E_{compute} < 0$
Local energy saving
Memory + interconnect
$\Delta E_{memory} + \Delta E_{interconnect}$
May rise with added traffic
Control + leakage
$\Delta E_{control} + \Delta E_{leakage}$
Also enter the comparison
$\Delta E_{system} = \Delta E_{compute} + \Delta E_{memory} + \Delta E_{interconnect} + \Delta E_{control} + \Delta E_{leakage}$
Lower total energy requires $\Delta E_{system} < 0$.
