

Coordinating the Architecture 2.0 Ecosystem

WORKSTREAM A: FOUNDATIONS

PROPOSAL 1

Open data schemas & tool contracts

- Open Agentic Interface (OAI)
- SLSA attempt lineage headers
- Protobuf / JSON-LD schemas
- Tool-interface assessments

PROPOSAL 2

Open implementation & silicon access paths

- SKY130 manufacturable path
- ASAP7 predictive research
- OpenROAD / OpenSTA checks
- MPW shuttle evidence

WORKSTREAM B: GOVERNANCE

PROPOSAL 3

Consortium governance & matched benchmarks

- MLCommons / SPEC working group
- Reference problem suites:
3 W XR, RISC-V RV64GCV,
CXL & UCle chiplet targets
- Closed division rules:
locked wrappers + compute
- Open division rules:
unconstrained surrogates
- Total workflow cost accounting:
GPU hours + license minutes
plus human triage time

WORKSTREAM C: EVALUATION

PROPOSAL 4

Grand challenges & architecture contests

- ISCA / MICRO / DAC tracks
- Constrained PPA generation
- Sample-efficient DSE
- Red-teaming & SVA security

PROPOSAL 5

Public repositories of failed design attempts

- Unroutable floorplan logs
- Negative-slack STA reports
- UPF power domain conflicts
- Negative controls for physics

WORKSTREAM D: SKILLS & REVIEW

PROPOSAL 6

Workforce curricula & review capacity

- University curriculum pivot:
formulation + verification
- Diagnostic fault-injection labs
- Autonomous Workflow Certified
(AWC) conference badges
- Supported architecture claims
for tapeout commitment
- Democratized ASIC economics

Negative controls calibrate surrogate physical feasibility

Connectors show shared dependencies for cross-team claims, not a universal adoption order.
