Formal return
Property, model, assumptions, engine, and budget
Counterexample
Violation trace returned
Check reachability and realizability
Repair a confirmed failure; refine an abstraction or proof if the trace is spurious.
Proved
Unbounded proof completed
Qualify the scoped obligation
Retain property, model, assumptions, and relevant vacuity checks.
Bounded-only
No violation through depth k
Retain the bound
Seek a completeness argument or a separate proof for unbounded safety.
Inconclusive
Resource limit or unfinished query
Revise the verification plan
Qualify any completed bound separately; a timeout establishes no proof or violation.
